## TEAM ROUND

## ALL ANSWERS MUST BE IN SIMPLEST EXACT FORM AND WRITTEN ON THE SEPARATE TEAM ANSWER SHEET.

1. Two chords in the same circle, neither of which are diameters, are perpendicular to each other. The point of intersection divides one chord into segments of 3 and 4 units and the other chord into segments that are 6 and 2 units. What is the diameter of the circle?
2. A circle of radius $\mathbf{r}$ is inscribed in a right triangle with hypotenuse $\mathbf{h}$. What is the ratio of the area of the circle to the area of the right triangle?
3. Determine the $y$-intercept of the line passing through the points whose coordinates are $(-3,1)$ and $(2,5)$. Write your answer as a reduced, improper fraction.
4. The parallel sides of a trapezoid are 3 units and 9 units while the nonparallel sides are 4 units and 6 units. A segment is drawn parallel to the bases and that segment divides the original trapezoid into two smaller trapezoids having the same perimeter. What is the greatest ratio into which each of the nonparallel sides is divided?
5. The sum of the first $\mathbf{n}$ odd positive integers is 9409 . What is the value of $\mathbf{n}$ ?
6. Write the following as an expression in the form $|\mathbf{A x}-\mathbf{B}|>\mathbf{C}$, where $\mathrm{A}, \mathrm{B}, \mathrm{C}$ are relatively prime integers: $\mathbf{x}>\mathbf{4}$ or $\mathbf{x}<\mathbf{1}$.
7. Determine the area, in square units, of a triangle whose vertices are:

$$
(-3,4),(1,-2),(\operatorname{and}(4,2)
$$

$8 \quad$ Triangle PQR is a right triangle with angle R being the right angle and sides RP and RQ having lengths of 3 units and 8 units, respectively. Also, $S$ is the point on the hypotenuse PQ such that RS bisects angle R. Find the length of the segment RS.
9. Find the sum of an arithmetic progression of 7 terms whose first term is 2 and whose $1^{\text {st }}, 3^{\text {rd }}$, and $7^{\text {th }}$ terms form a geometric progression.
